Supernetworks: Decision-Making for the Information Age (New Dimensions in Networks)

Anna Nagurney, June Dong

Supernetworks: Decision-Making for the Information Age (New Dimensions in Networks) Anna Nagurney, June Dong

The advent of the Information Age has transformed the ways in which individuals work, travel and conduct their daily activity. Anna Nagurney and June Dong lay out the theory of supernetworks, networks that exist over and above existing electronic networks, in order to formalize decision-making in the Information Age. Supernetworks are conventional in scope, graphical in perspective and, with the accompanying theory, predictive in nature. In this work, the authors provide a unifying framework for the study of decision-making by a variety of economic agents including consumers and producers as well as distinct intermediaries in the context of today's networked economy. They provide the conceptual, analytical and computational tools for the study of supernetworks. Their approach is rigorous and of sufficient generality and detail to give added insight into the behaviour and structure of large-scale, interacting and competitive network systems, such as transportation, telecommunication and financial networks.

From reader reviews:

Lisa Gonzales:

Information is provisions for those to get better life, information these days can get by anyone in everywhere. The information can be a understanding or any news even a huge concern. What people must be consider whenever those information which is within the former life are challenging be find than now's taking seriously which one would work to believe or which one typically the resource are convinced. If you obtain the unstable resource then you get it as your main information you will see huge disadvantage for you. All of those possibilities will not happen in you if you take Supernetworks: Decision-Making for the Information Age (New Dimensions in Networks) as the daily resource information.

Roger Alford:

Often the book Supernetworks: Decision-Making for the Information Age (New Dimensions in Networks) has a lot of information on it. So when you make sure to read this book you can get a lot of help. The book was written by the very famous author. Mcdougal makes some research prior to write this book. That book very easy to read you will get the point easily after looking over this book.

Burton Zinn:

Are you kind of busy person, only have 10 or maybe 15 minute in your time to upgrading your mind skill or thinking skill even analytical thinking? Then you have problem with the book as compared to can satisfy your limited time to read it because pretty much everything time you only find reserve that need more time to be go through. Supernetworks: Decision-Making for the Information Age (New Dimensions in Networks) can be your answer as it can be read by you actually who have those short extra time problems.

John Bonilla:

What is your hobby? Have you heard which question when you got college students? We believe that that query was given by teacher on their students. Many kinds of hobby, Everyone has different hobby. And you also know that little person like reading or as looking at become their hobby. You need to understand that reading is very important as well as book as to be the point. Book is important thing to include you knowledge, except your current teacher or lecturer. You get good news or update in relation to something by book. A substantial number of sorts of books that can you choose to adopt be your object. One of them is actually Supernetworks: Decision-Making for the Information Age (New Dimensions in Networks).
