# Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization

Alon Friedman

## **Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization** Alon Friedman

*Statistics for Library and Information Services*, written for non-statisticians, provides logical, user-friendly, and step-by-step instructions to make statistics more accessible for students and professionals in the field of Information Science. It emphasizes concepts of statistical theory and data collection methodologies, but also extends to the topics of visualization creation and display, so that the reader will be able to better conduct statistical analysis and communicate his/her findings.

The book is tailored for information science students and professionals. It has specific examples of dataset sets, scripts, design modules, data repositories, homework assignments, and a glossary lexicon that matches the field of Information Science. The textbook provides a visual road map that is customized specifically for Information Science instructors, students, and professionals regarding statistics and visualization.

Each chapter in the book includes full-color illustrations on how to use *R* for the statistical model that particular chapter will cover.

This book is arranged in 17 chapters, which are organized into five main sections:

- the first section introduces research design and data collection;
- the second section discusses basic statistical concepts, including descriptive, bivariate, time series, and regression analyses;
- section 3 covers the subject of visualization creation using Open Source *R*;
- section 4 covers decision making from the analysis; and
- the last section provides examples and references.

Every chapter illustrates how to use Open Source *R* and features two subsections for the major ideas of the chapter: its statistical model and its visual representation. The statistical model captures the main statistical formulas/theories covered in each chapter, while the visual representation addresses the subject of the types of visualization that are produced from the statistical analysis model covered in that particular chapter. The last part of each chapter contains exercises that the student/professional will be able to solve and answer. Each exercise includes fill-in-the-blank and multiple-choice questions.

### **From reader reviews:**

#### **Jeraldine Thurman:**

Do you have favorite book? For those who have, what is your favorite's book? Book is very important thing for us to learn everything in the world. Each publication has different aim or goal; it means that book has different type. Some people sense enjoy to spend their the perfect time to read a book. They are really reading whatever they take because their hobby is usually reading a book. What about the person who don't like looking at a book? Sometime, person feel need book when they found difficult problem or maybe exercise. Well, probably you should have this Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization.

#### **Nick Zapata:**

Book is to be different for every grade. Book for children until finally adult are different content. To be sure that book is very important for people. The book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization was making you to know about other information and of course you can take more information. It is very advantages for you. The book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization is not only giving you far more new information but also to become your friend when you feel bored. You can spend your spend time to read your guide. Try to make relationship using the book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization. You never feel lose out for everything should you read some books.

#### **Shirley Wales:**

Precisely why? Because this Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization is an unordinary book that the inside of the guide waiting for you to snap that but latter it will surprise you with the secret that inside. Reading this book alongside it was fantastic author who all write the book in such incredible way makes the content within easier to understand, entertaining means but still convey the meaning totally. So , it is good for you because of not hesitating having this any more or you going to regret it. This phenomenal book will give you a lot of advantages than the other book get such as help improving your ability and your critical thinking method. So , still want to hold up having that book? If I ended up you I will go to the book store hurriedly.

#### **Ronald Sadowski:**

That publication can make you to feel relax. That book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization was vibrant and of course has pictures on there. As we know that book Statistics for Library and Information Services: A Primer for Using Open Source R Software for Accessibility and Visualization has many kinds or genre. Start from kids until teens. For example Naruto or Private investigator Conan you can read and feel that you are the character on

there. Therefore , not at all of book are generally make you bored, any it offers you feel happy, fun and chill out. Try to choose the best book in your case and try to like reading that.
